Mr. Dean:

Since our meeting with you last year we have formalized a number of items. One leads to the need to follow up with you. We have looked at a number of ways to house our equipment at your antenna site in Paris and we have settled on an item from Portable Storage Solutions. They are located in Paris and have a shipping container business which, in one offering, they have an office made out of a 20' shipping container. This picture shows an example:

Portable Storage Solutions has priced it very reasonably and so we are preparing to move forward with its acquisition. The unit is heated and cooled, has electrical service and is fully insulated. Once we purchase it we will have it taken to one of our Club member's property for further customization in anticipation of installation at the KXII location.

We are further exploring an auto-start generator and propane bottle to run it. In our meeting you indicated that you were finalizing some additional plans for the site and that we would need to further discuss placing our gear there. As we prepare to buy this building and explore power options including utility and generator we wanted to follow up and see if we could get some further commitment to allowing us to place the items at your site. To that end would you suggest a phone call, for the team that last visited with you go to the station and further develop the plan or what?

Thank you in advance for your continued consideration of this matter.

Best Regards,
